1 Introduction

In this document we describe how you use VISIMPLE with different configurations(chapter 2). The use of the menu is explained in chapter 3. In chapter 4 are shown main actions in the simulation.

You should notice that PUS is now called ++SYSTEMS DEZENT and is shown in the outdated screen captures as PUS. In the configurations of VISIMPLE will be possibly used the old name PUS.

2 User Interface

The user interface gives you many interactions, some of them are listed here. Try out everything possible that you know from the application.

User interaction possibilities:

1. Zooming with the mouse-scroll wheel and moving the map with the right mouse button, similar to GoogleMaps.
2. Multiple selection of the infrastructure elements by raising the rectangle with the left mouse button.

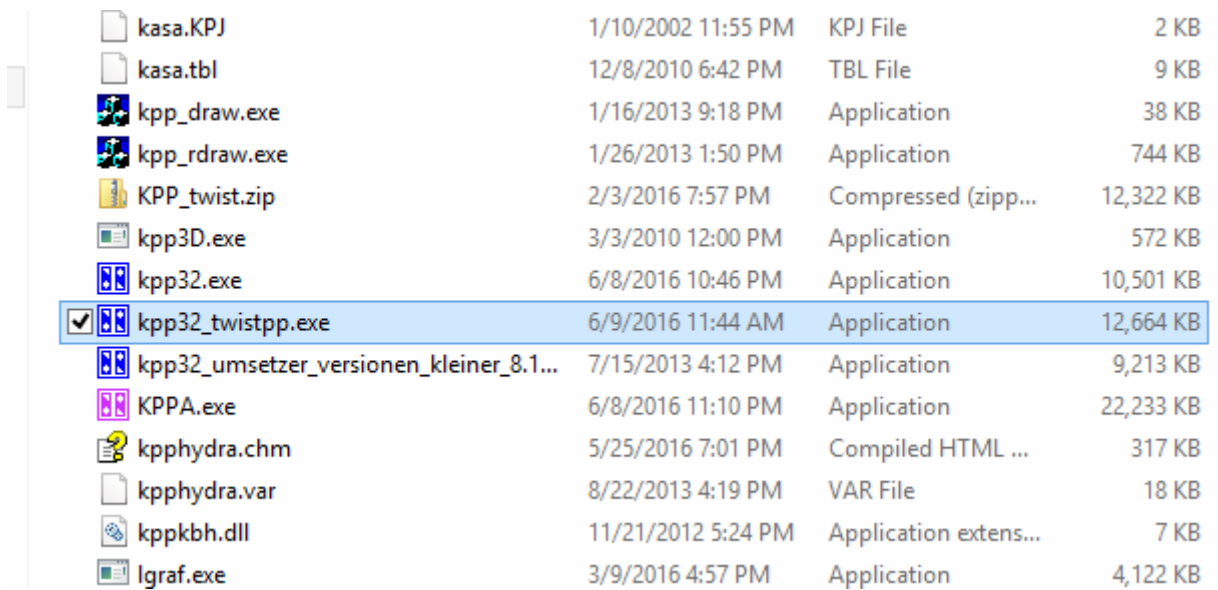

3 Before you start VISIMPLE

You can start VISIMPLE or else configure and use e.g. with SYSTEMS DEZENT. The latter case we describe in the following.

3.1 ++SYSTEMS DEZENT-Preparation

Before you can start VISIMPLE, you have to start and adjust ++SYSTEMS DEZENT.

1. Start ++SYSTEMS DEZENT by clicking on „kpp32_twistpp.exe“ .

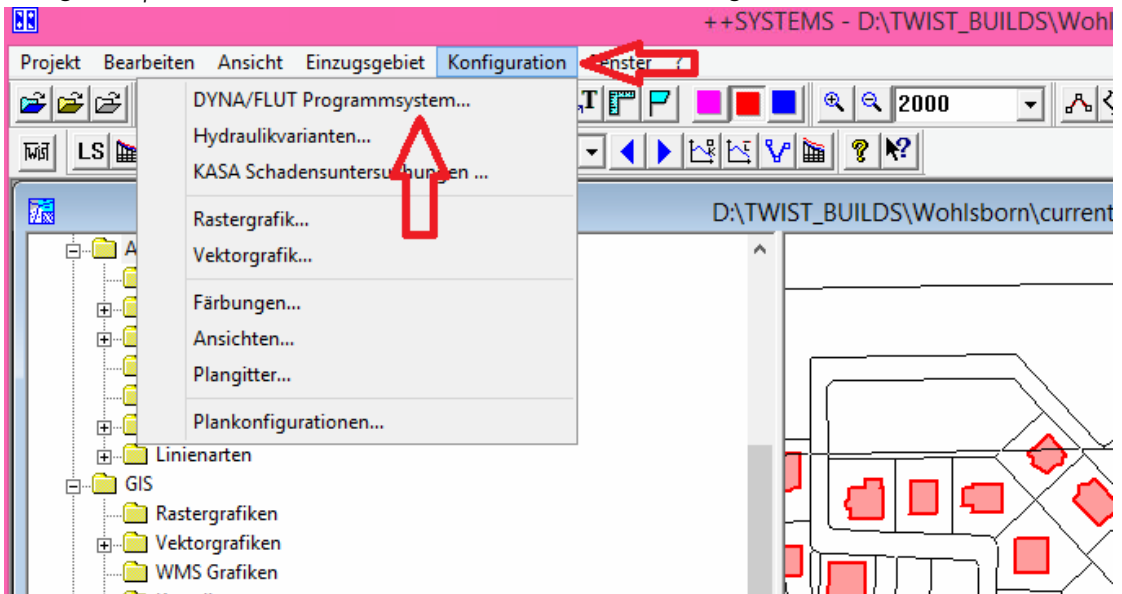

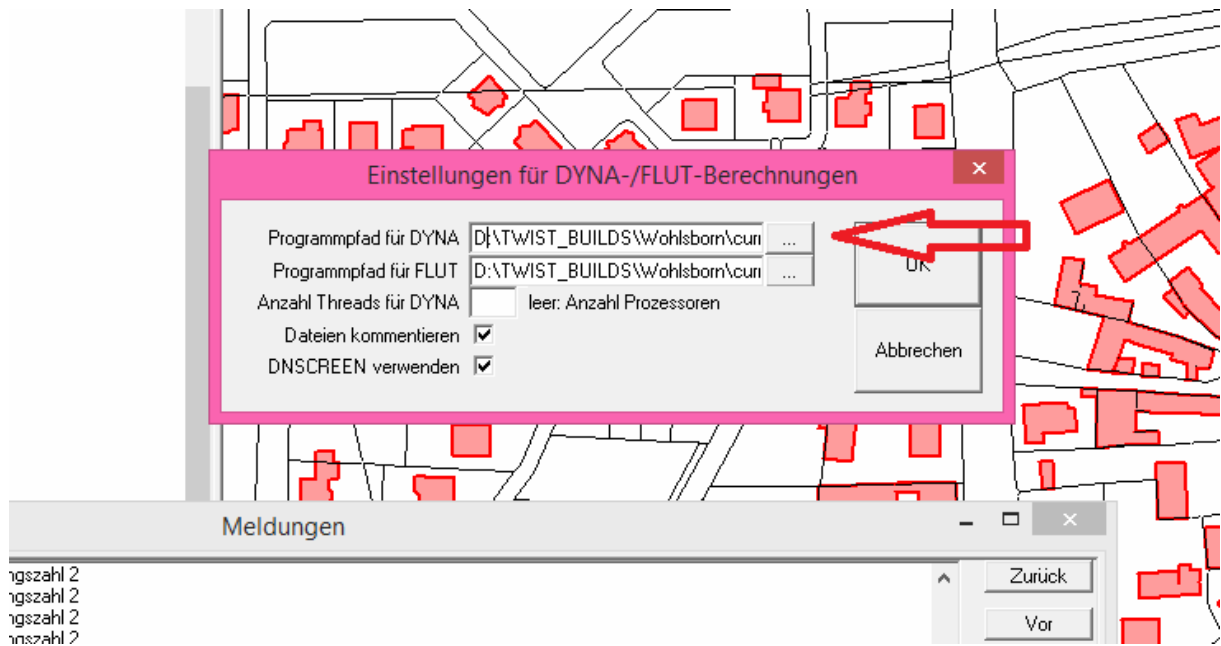

2. Open the .kpp-File via „Datei -> Öffnen...“ and choose the .kpp-File.

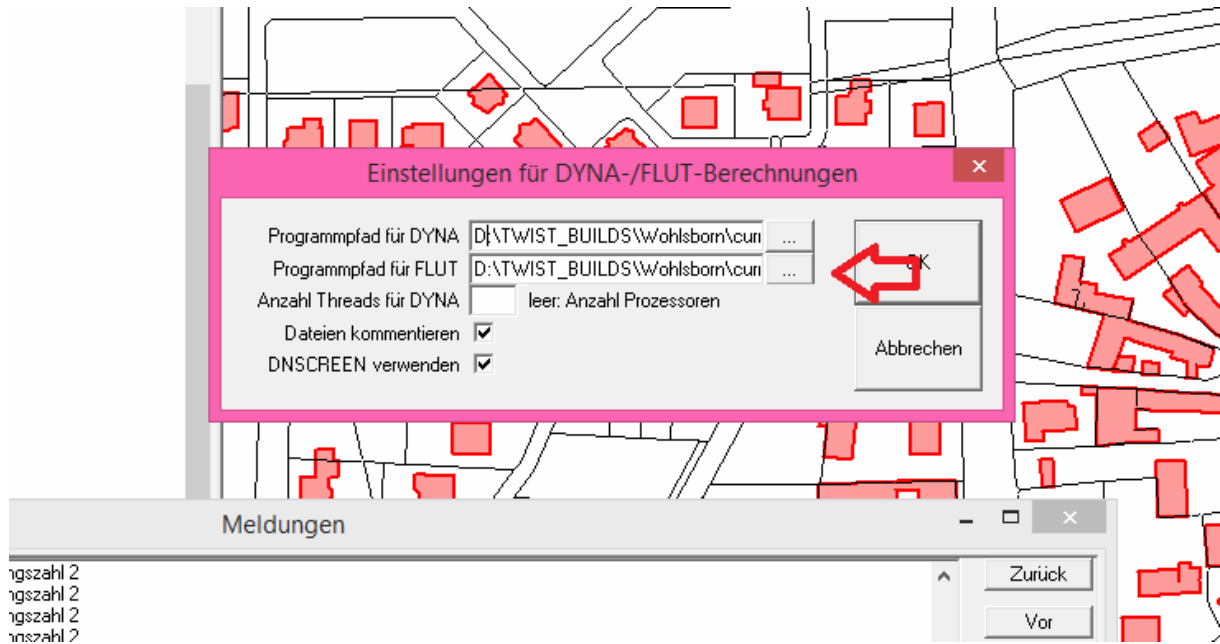

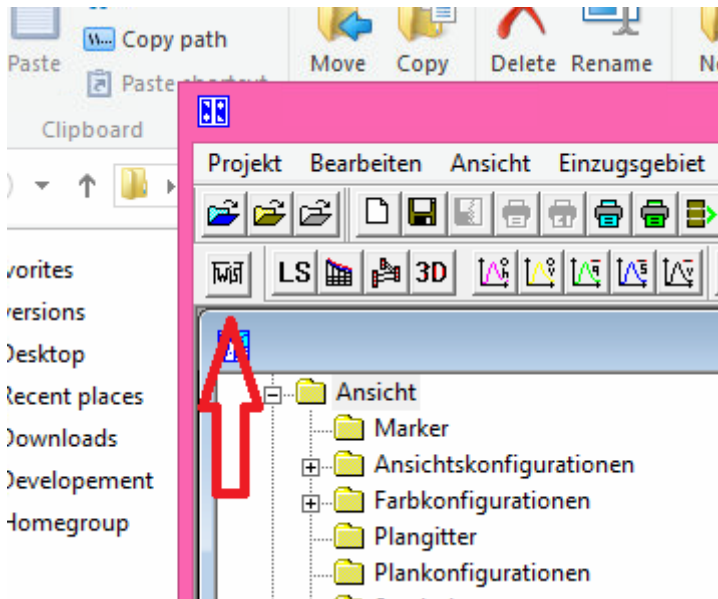

3. ! At the very first start you have to pick „DYNA/FLUT Programmsystem...“ under Konfiguration and under „Programm Pfad für DYNA“ the *dyna.exe* and under „Programm Pfad für FLUT“ the *flut.exe* in the folder of the engineersoftware.

- Next you have to start the VISIMPLE ++SYSTEMS DEZENT Gameserver. For that click on the VISIMPLE symbol on the top of the bar.

5. Dann „Server starten“ auswählen.

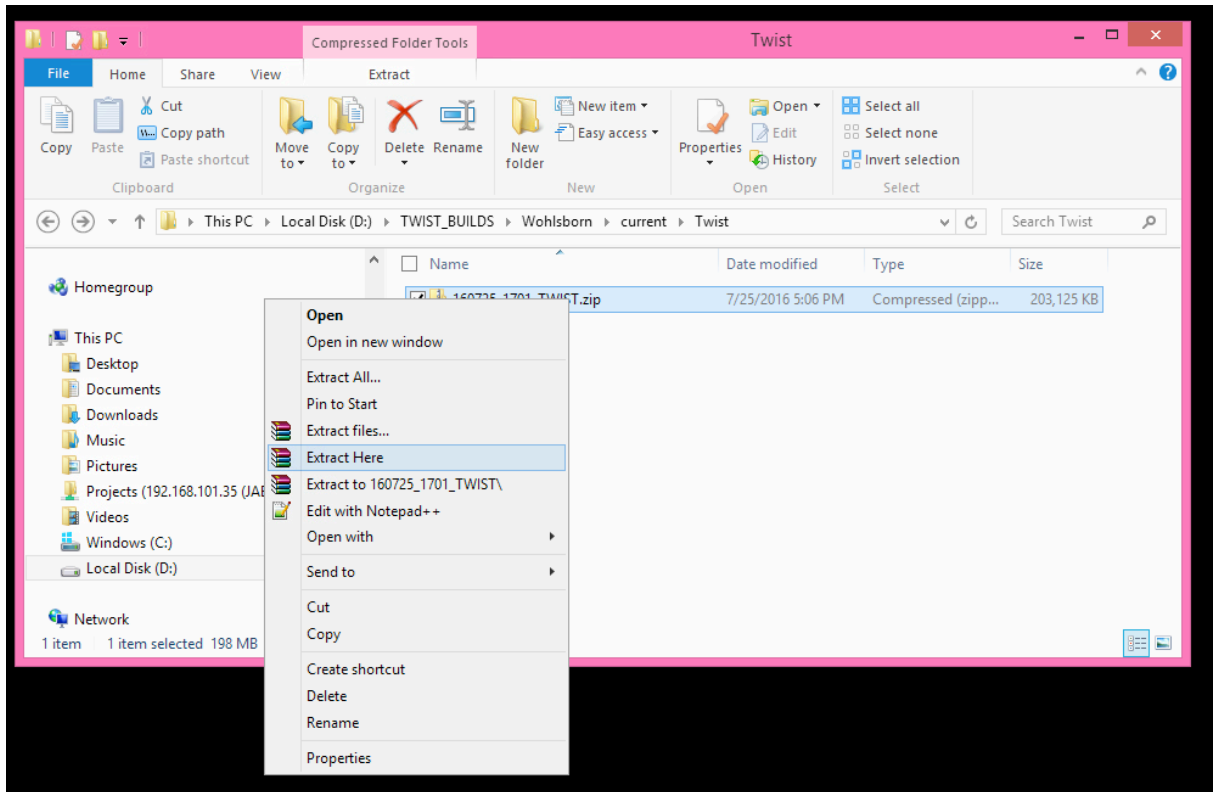

3.2 Preparation for VISIMPLE

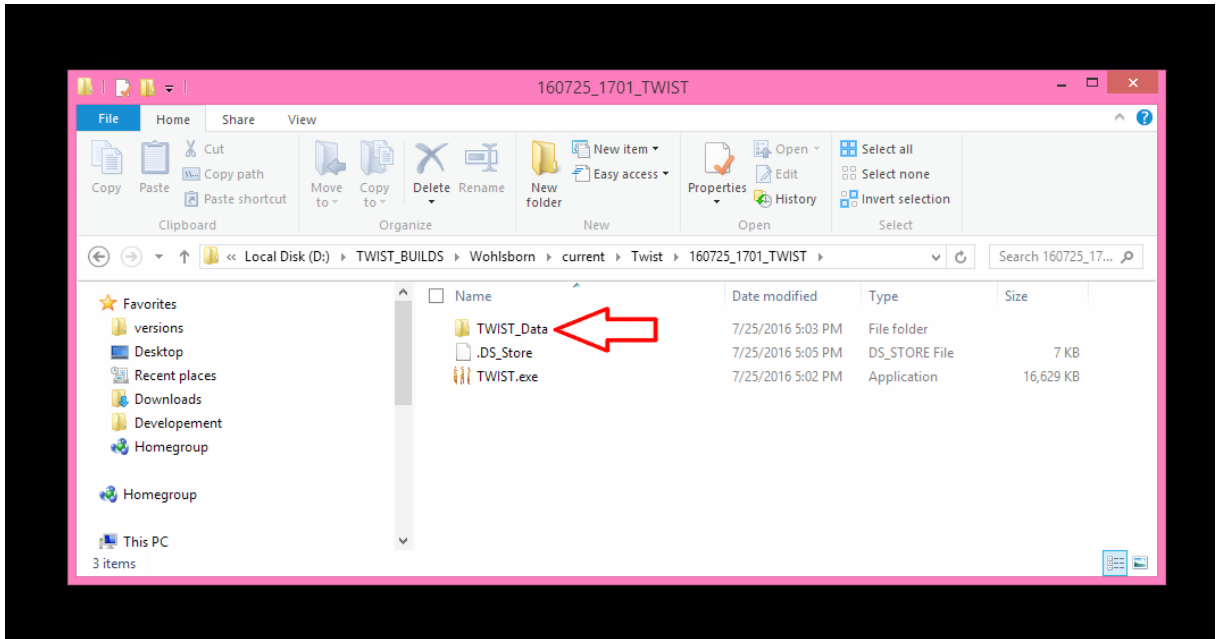

After preparing ++SYSTEMS DEZENT, you have to prepare the game. The following steps have to be done one time before the first start of the current version of VISIMPLE.

3.2.1 Adjust if the game is used with ++SYSTEMS DEZENT

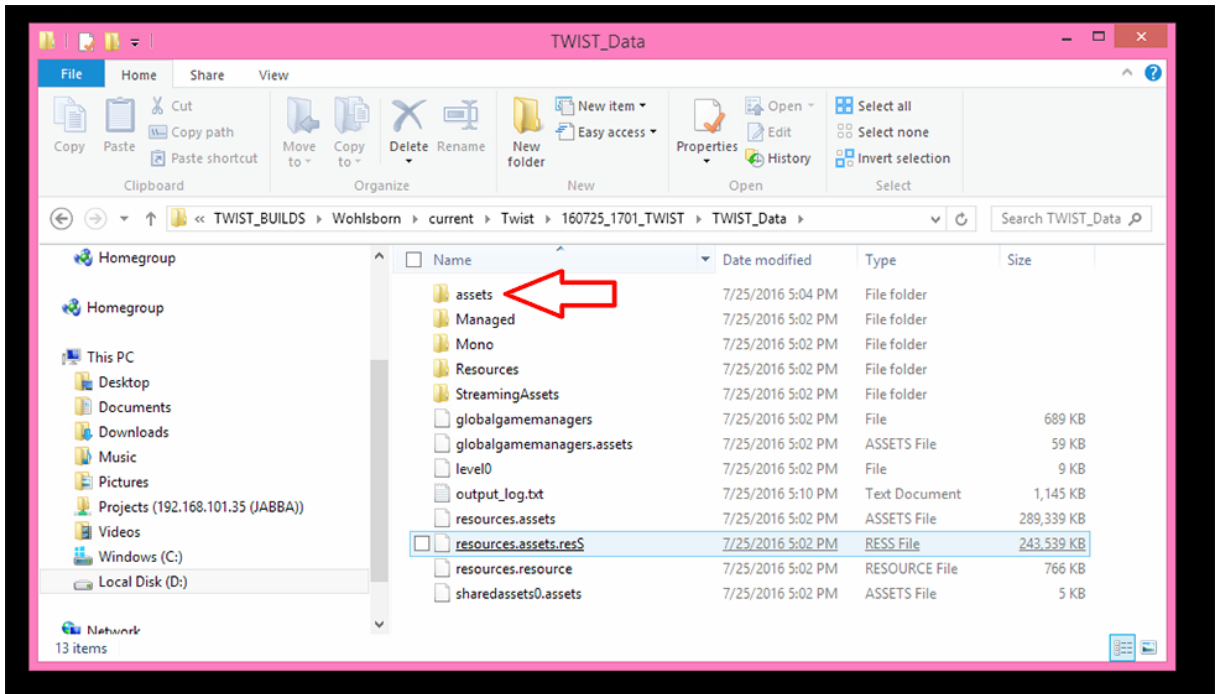

1. First extract the downloaded file in a quick viewable file.

2. In the extracted folder click on the „VISIMPLE_Data“.

3. In „VISIMPLE_Data“ open the folder „assets“.

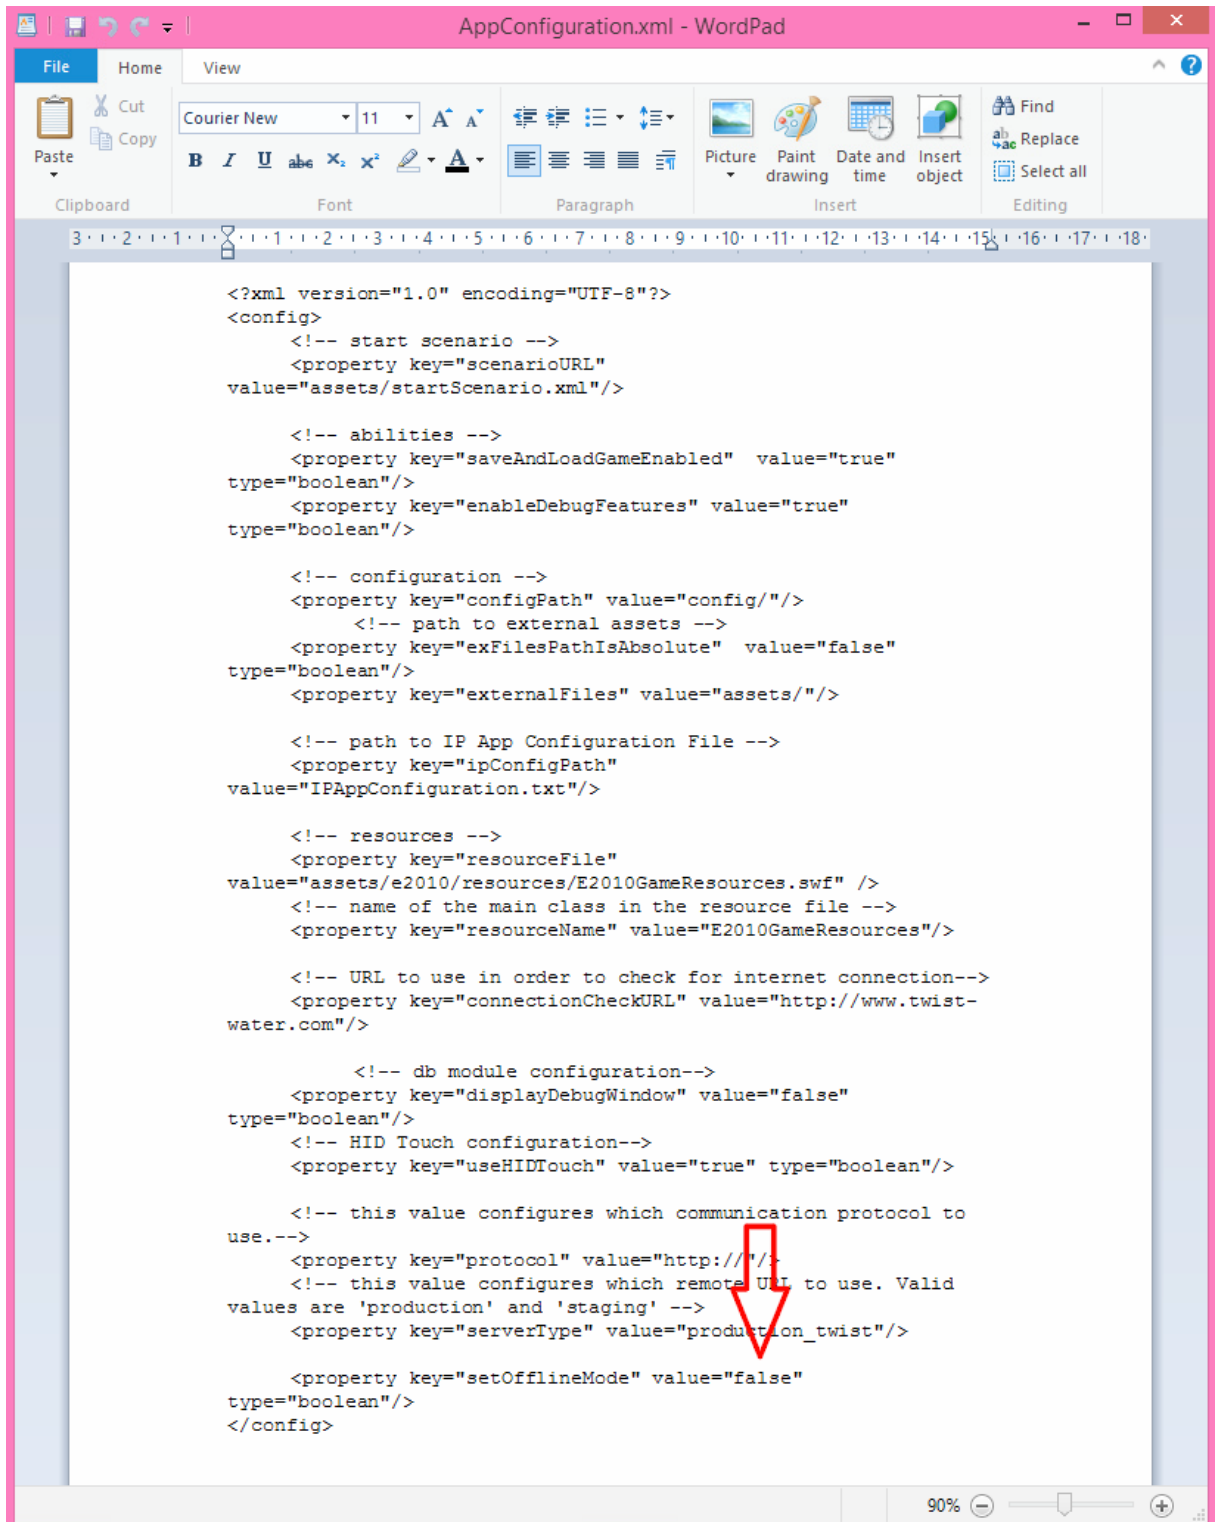

4. Right click on AppConfiguration.xml and pick „Öffnen mit... -> Wordpad“n.

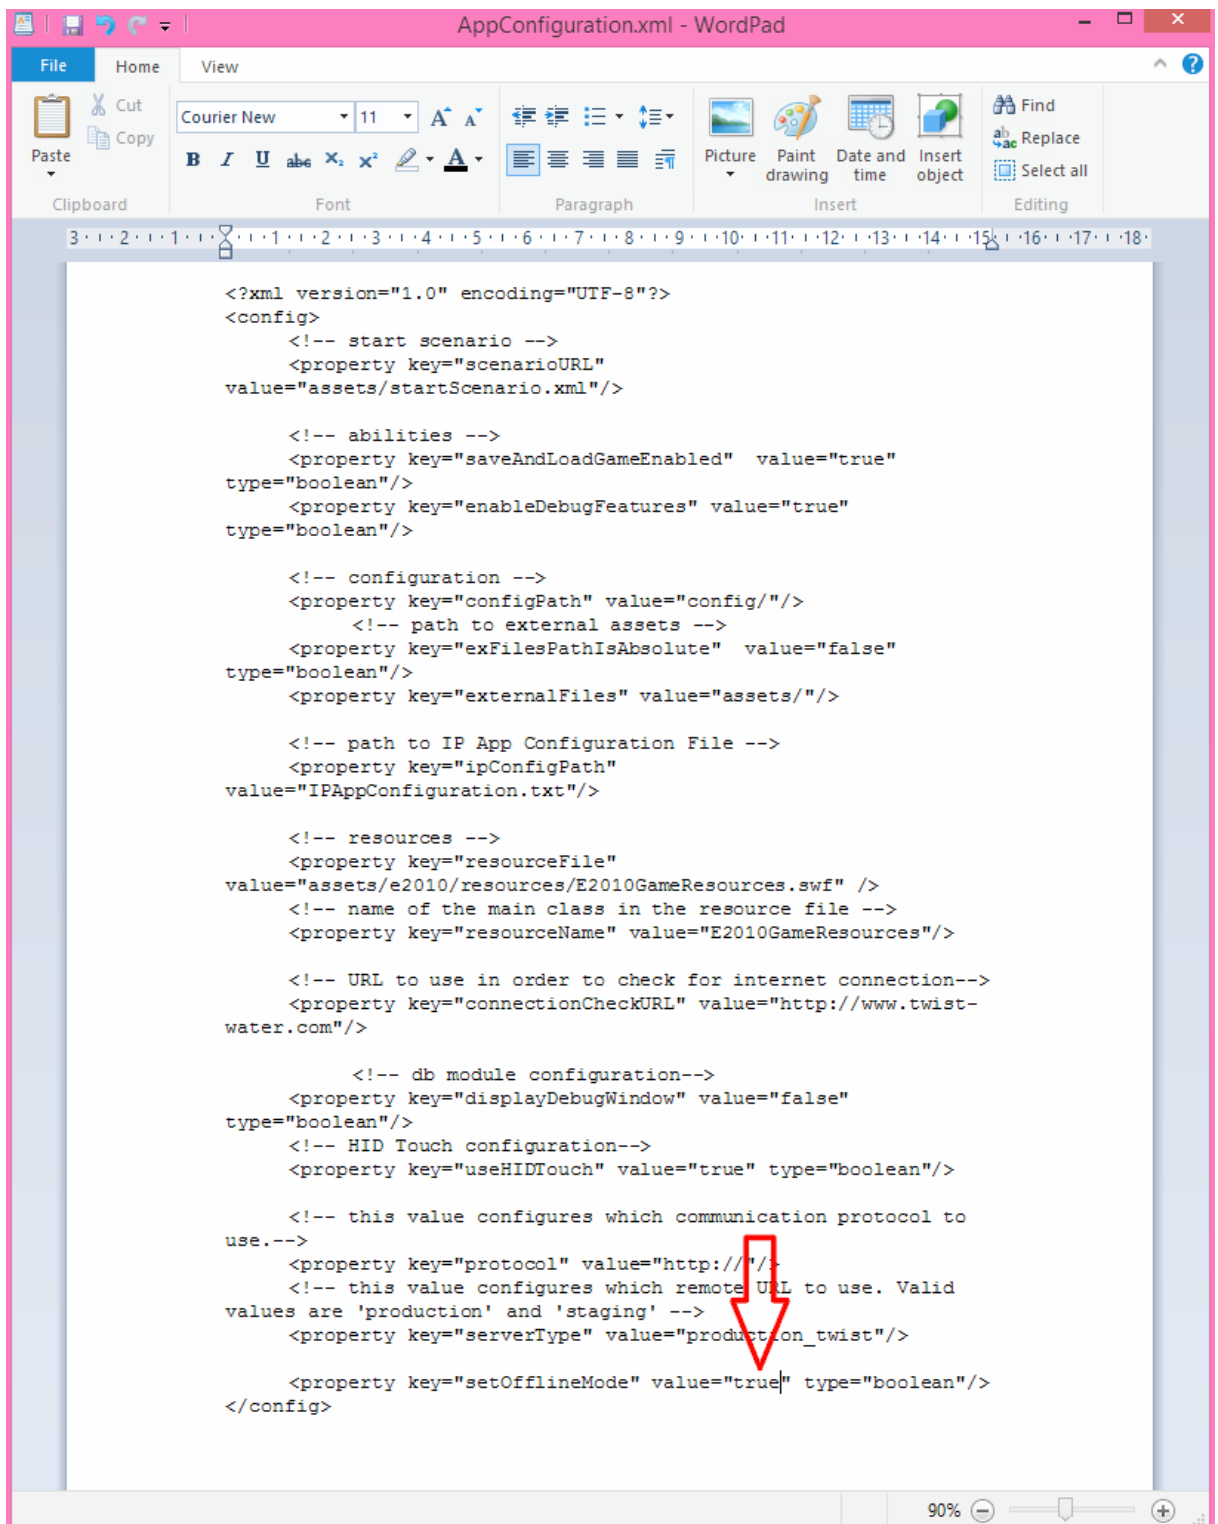

5. In this file you can adjust if you want to use VISIMPLE with or without ++SYSTEMS DEZENT.

5.1. If you want to use VISIMPLE with the ++SYSTEMS DEZENT, enter property key="setOfflineMode" in the row under value="false". (view image)

- 5.2. If you do not want to use VISIMPLE with the ++SYSTEMS DEZENT, enter property key="setOfflineMode" in the row under value="true". (view image)

```
<?xml version="1.0" encoding="UTF-8"?>
<config>
  <!-- start scenario -->
  <property key="scenarioURL"
value="assets/startScenario.xml"/>

  <!-- abilities -->
  <property key="saveAndLoadGameEnabled" value="true"
type="boolean"/>
  <property key="enableDebugFeatures" value="true"
type="boolean"/>

  <!-- configuration -->
  <property key="configPath" value="config"/>
  <!-- path to external assets -->
  <property key="exFilesPathIsAbsolute" value="false"
type="boolean"/>
  <property key="externalFiles" value="assets"/>

  <!-- path to IP App Configuration File -->
  <property key="ipConfigPath"
value="IPAppConfiguration.txt"/>

  <!-- resources -->
  <property key="resourceFile"
value="assets/e2010/resources/E2010GameResources.swf" />
  <!-- name of the main class in the resource file -->
  <property key="resourceName" value="E2010GameResources"/>

  <!-- URL to use in order to check for internet connection-->
  <property key="connectionCheckURL" value="http://www.twist-
water.com"/>

  <!-- db module configuration-->
  <property key="displayDebugWindow" value="false"
type="boolean"/>
  <!-- HID Touch configuration-->
  <property key="useHIDTouch" value="true" type="boolean"/>

  <!-- this value configures which communication protocol to
use.-->
  <property key="protocol" value="http://"/>
  <!-- this value configures which remote URL to use. Valid
values are 'production' and 'staging' -->
  <property key="serverType" value="production_twist"/>

  <property key="setOfflineMode" value="true" type="boolean"/>
</config>
```

6. Afterwards save the document (do not make changes in the name or the file ending).

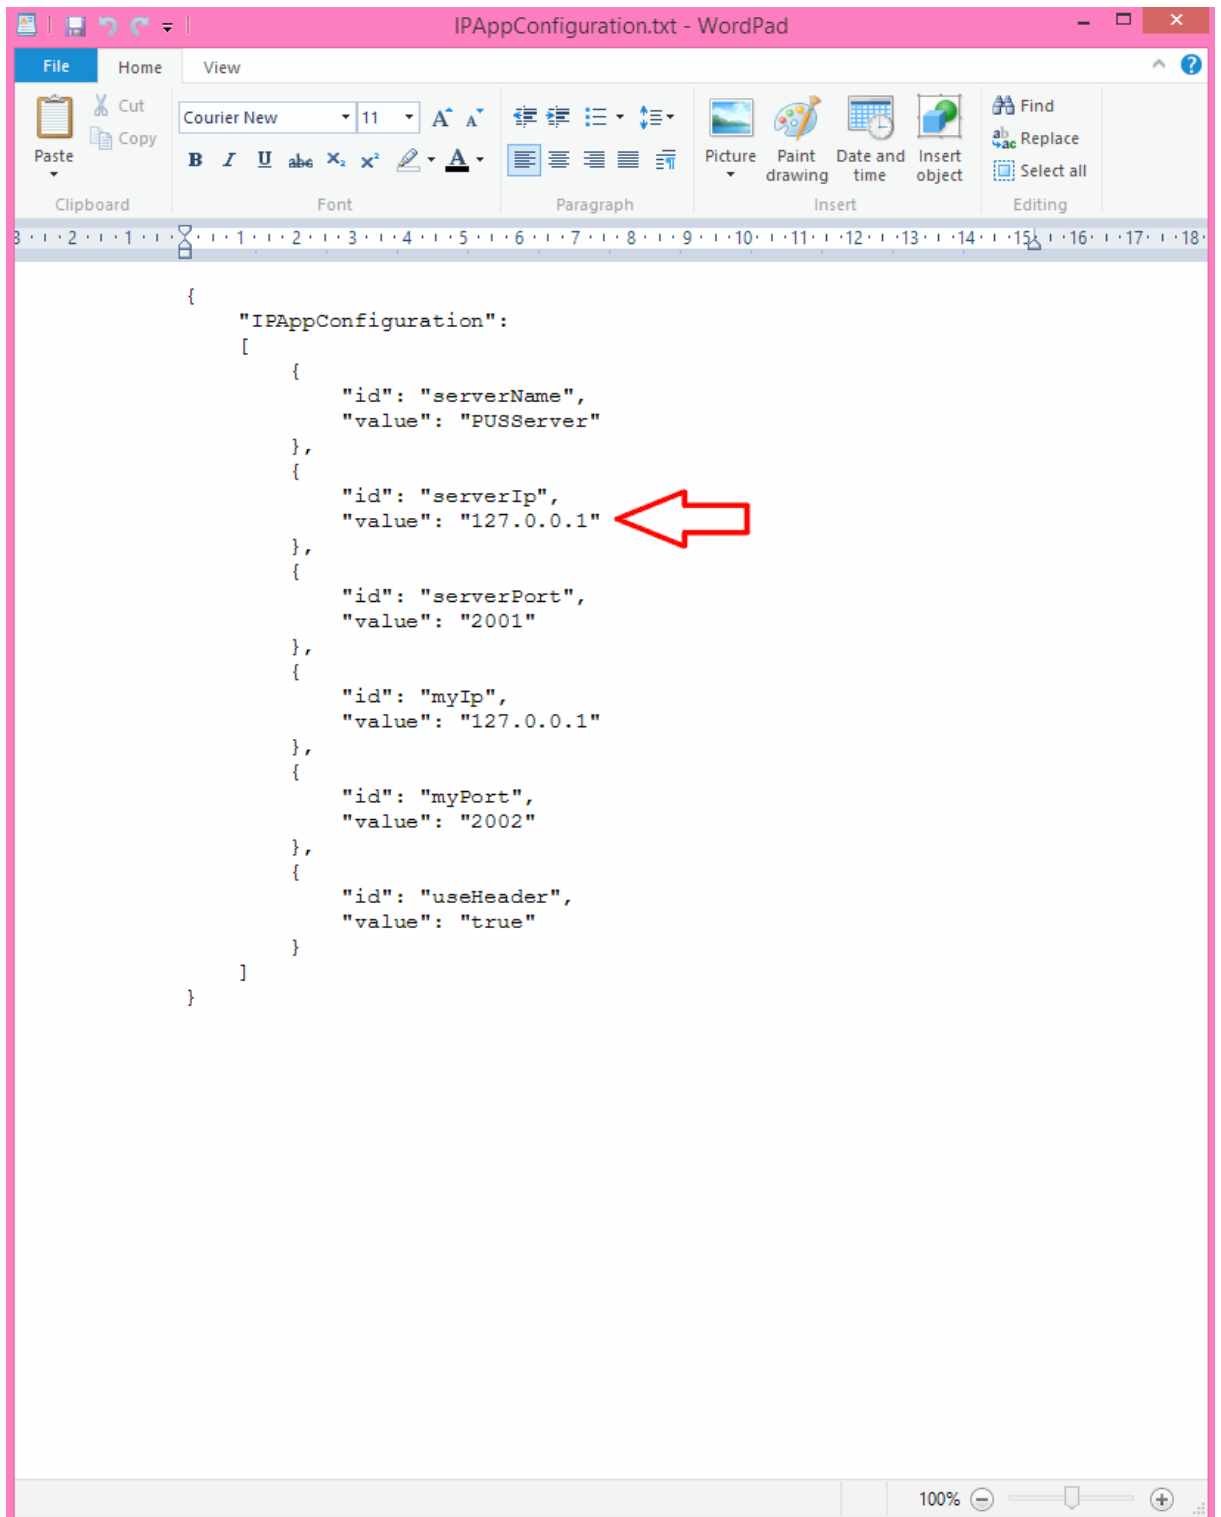

3.2.2 Adjust the server/client addresses

If you use VISIMPLE The Game without ++SYSTEMS DEZENT, you have not to make the following settings. If you want to make an internet connection between ++SYSTEMS DEZENT and VISIMPLE The Game, please go on with step 1.3.

1. In the folder „assets“ (view 1.2.1 step 1 to 3) rightclick the file IPAppConfiguration.txt and pick „Öffnen mit... -> Wordpad“.

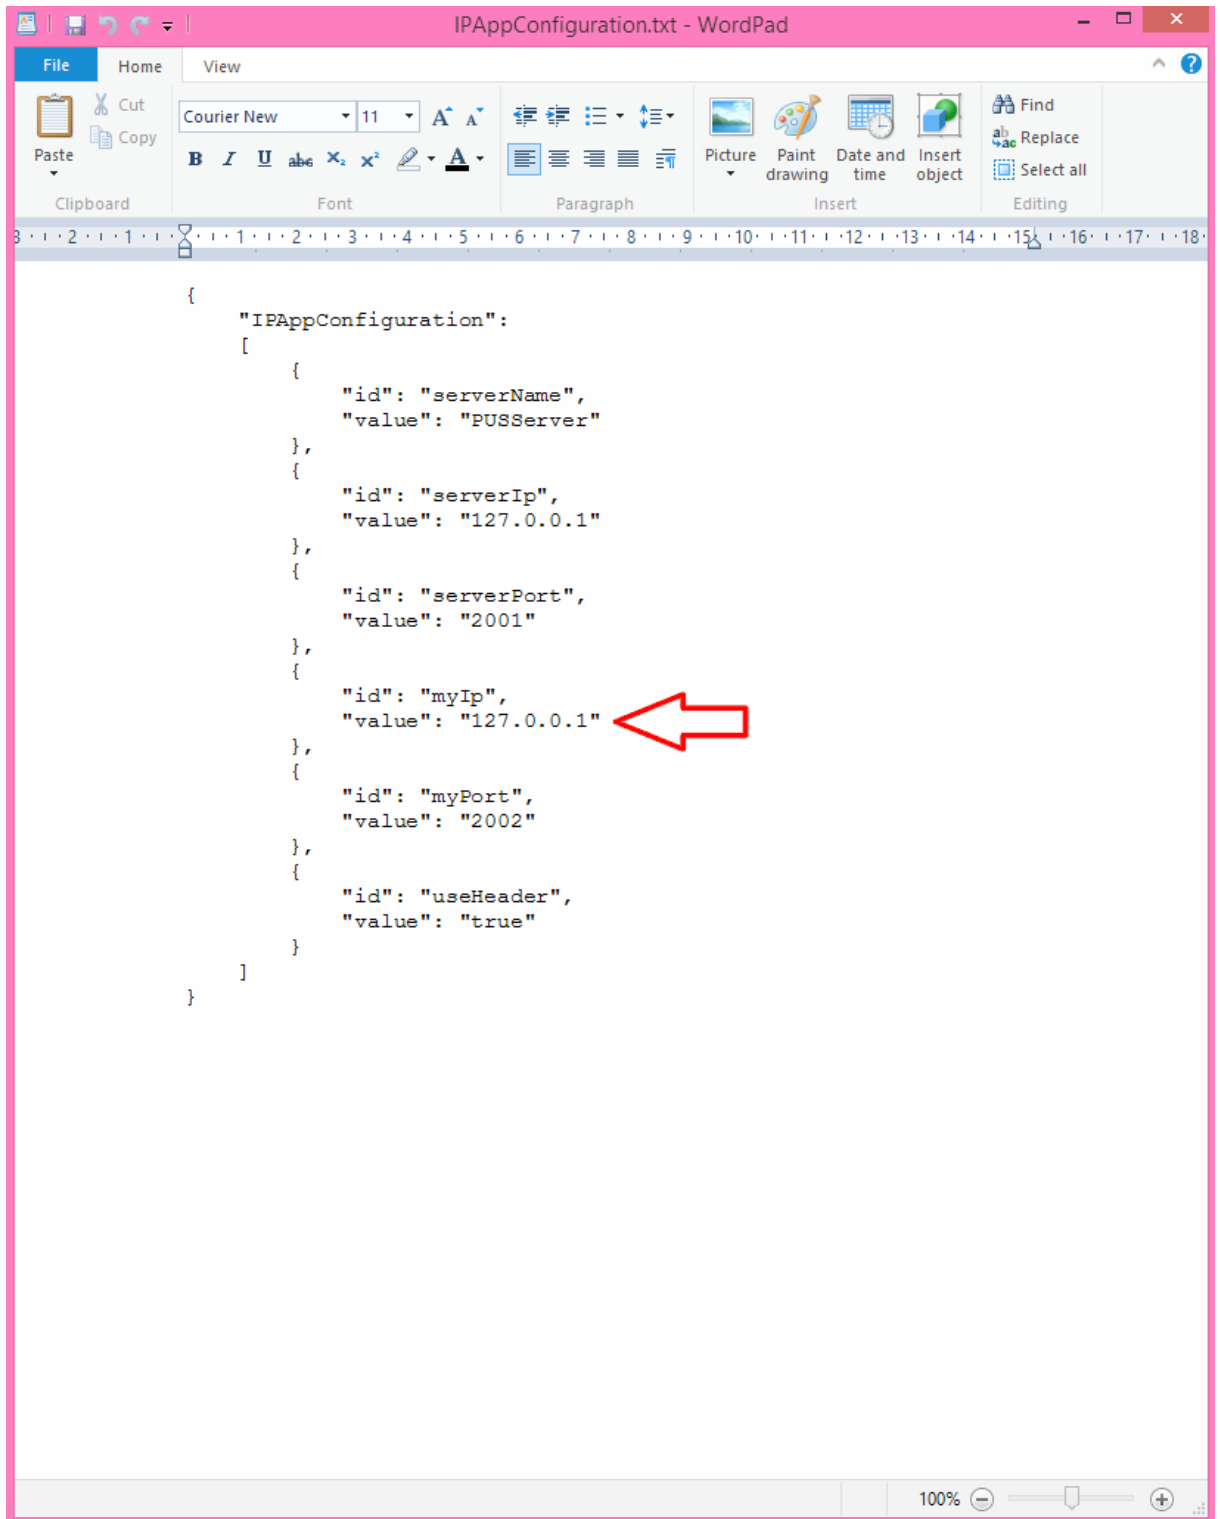

2. What is written here is dependent if you have ++SYSTEMS DEZENT and VISIMPLE The Game on the same computer in one time or on two different computers.
 - 2.1. If you use ++SYSTEMS DEZENT and the game on the same computer view if under "id": "serverIp" at "value": the adresse "127.0.0.1" (with quotation marks – view image) is being registered.

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "127.0.0.1"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "127.0.0.1"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

In addition under "id": "myIp" in between the quotation marks behind "value": register the adresse "127.0.0.1" (with quotation marks – view image).

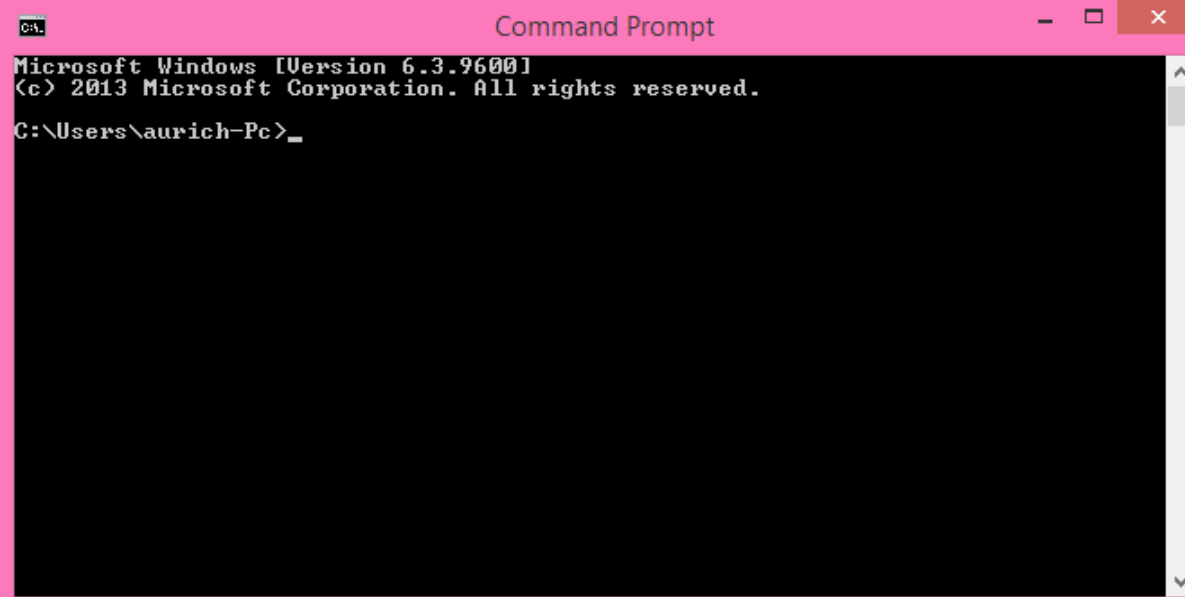

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "127.0.0.1"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "127.0.0.1"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

Afterwards you save the document (do not make changes in the name or the file ending)

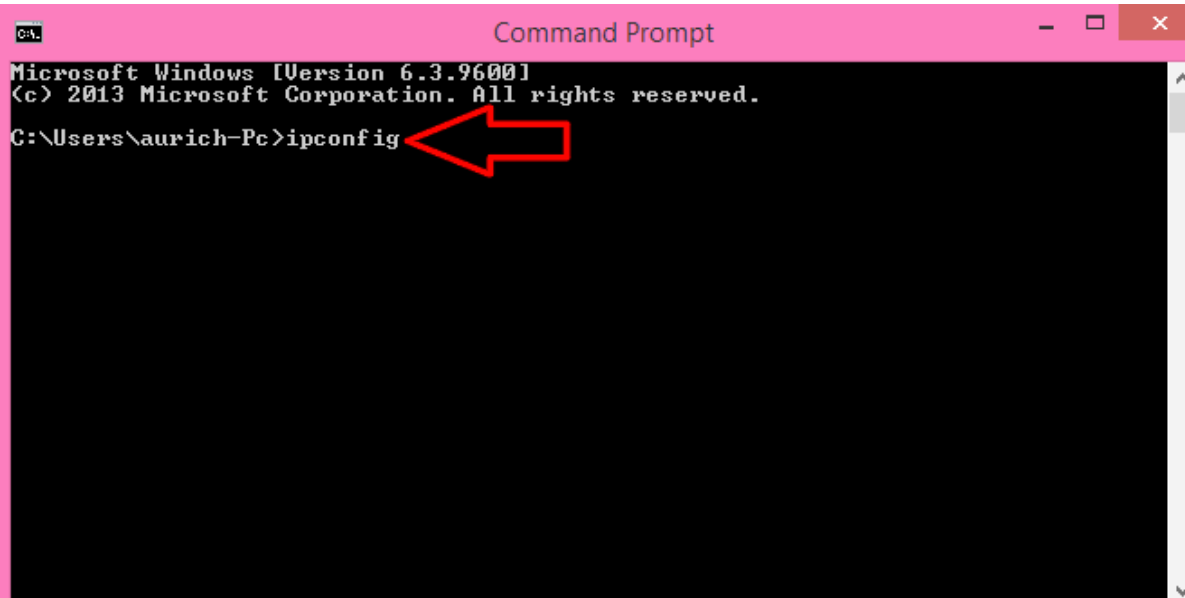

2.2. If you use ++SYSTEMS DEZENT and the game on two different computers must be under "id": "serverlp" in between the quotation marks behind "value": the address of the computer being registered on which the ++SYSTEMS DEZENT is running.

2.2.1. You get to now this on the specific computer when you go under „Start -> Ausführen“ (or the magnifying glass symbol under Windows 8/10) and click and then write „cmd“ and press the enter button. The following window will open:

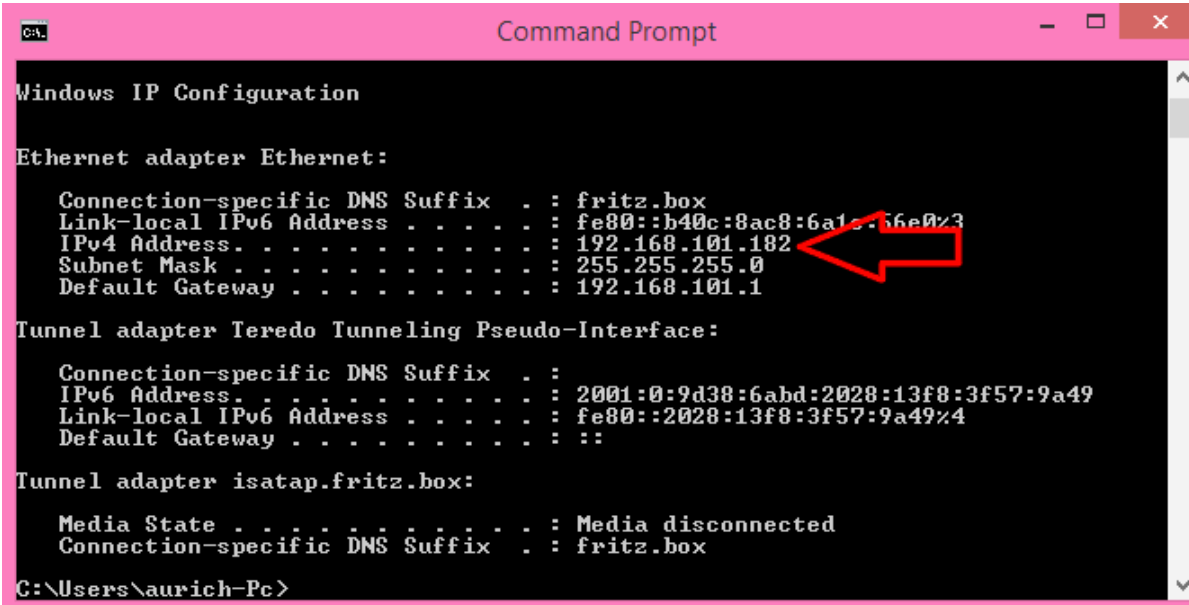

```
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.
C:\Users\aurich-Pc>_
```

2.2.2. Type „ipconfig“ in there and confirm with the enter button.

```
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.
C:\Users\aurich-Pc>ipconfig
```

2.2.3. You can see the IP adresse under IPv4 adresse.

```
Command Prompt

Windows IP Configuration

Ethernet adapter Ethernet:

    Connection-specific DNS Suffix . . : fritz.box
    Link-local IPv6 Address . . . . . : fe80::b40c:8ac8:6a1e:56e0%3
    IPv4 Address. . . . . : 192.168.101.182
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.101.1

Tunnel adapter Teredo Tunneling Pseudo-Interface:

    Connection-specific DNS Suffix . . :
    IPv6 Address. . . . . : 2001:0:9d38:6abd:2028:13f8:3f57:9a49
    Link-local IPv6 Address . . . . . : fe80::2028:13f8:3f57:9a49%4
    Default Gateway . . . . . : ::

Tunnel adapter isatap.fritz.box:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix . . : fritz.box

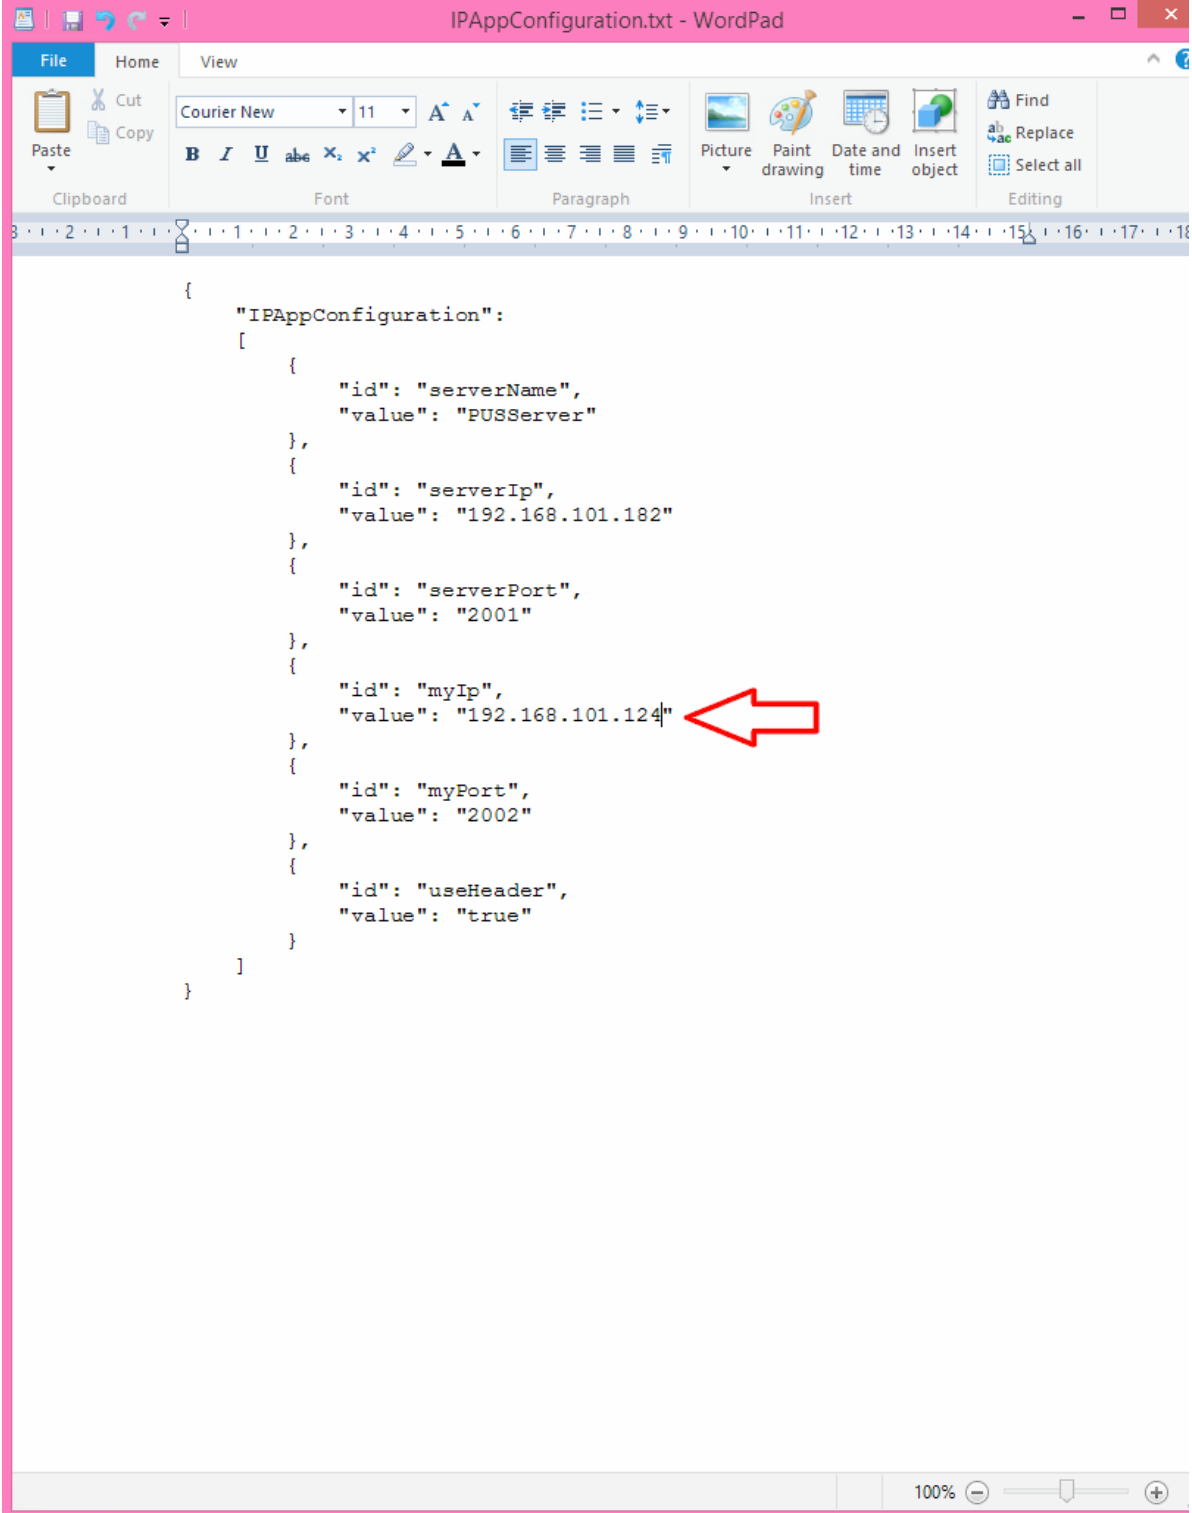

C:\Users\aurich-Pc>
```

2.2.4. You put this IP adresse in the IPAppConfiguration.txt under "id": "serverIp" in between the quotations marks and behind "value".

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "192.168.101.182"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "192.168.101.124"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

2.2.5. Repeat the steps 2.2.1 to 2.2.3 on the computer with VISIMPLE The Game and register the IP adresse under "id": "myIp" in between the quotation marks behind "value": .

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "192.168.101.182"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "192.168.101.124"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

2.2.6. Afterwards save the document (do not make changes in the name or the file ending)

VISIMPLE The Game is now configured and ready to start by clicking in the .exe file in the Twist Verzeichnis.

3.3 ++SYSTEMS DEZENT and VISIMPLE The game trough the internet

For playing VISIMPLE The Game trough the internet, you have to adjust the configurationsfile of VISIMPLE The Game and set up a port forwarding for a trouble-free communication.

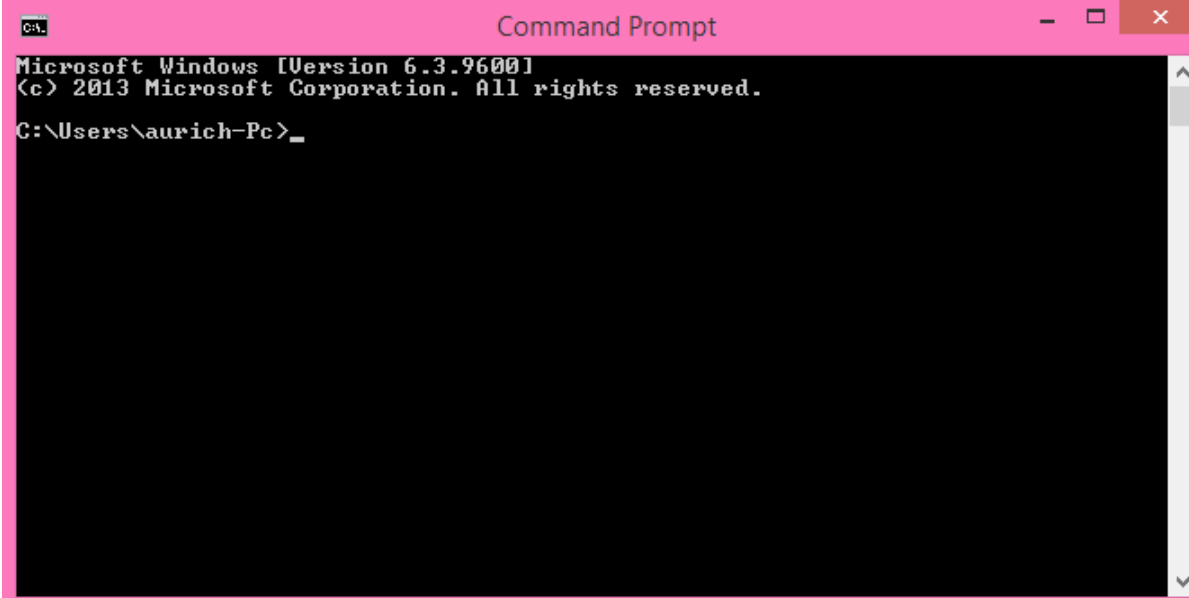

3.3.1 Adjust the server/client adresse

1. In the folder „assets“ (view 1.2.1 step 1 to 3) right click the file IPAppConfiguration.txt and pick „Öffnen mit... -> Wordpad“.

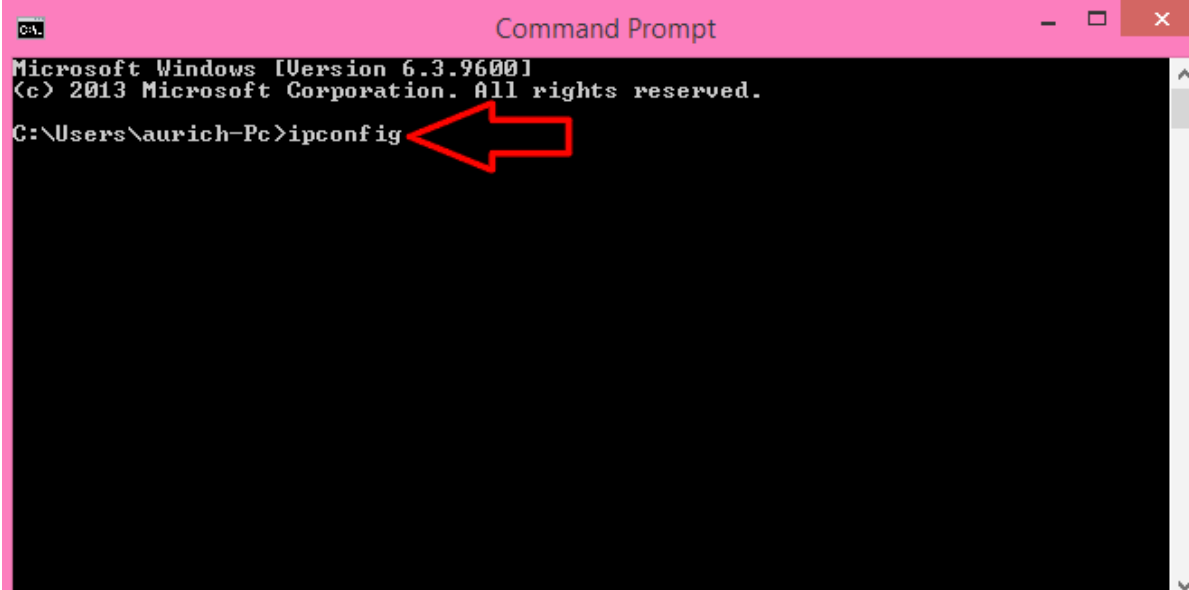

2.3. Under "id": "mylp" in between the quotation marks behind "value": have to be put the adresse of the computer where VISIMPLE The Game is running.

2.3.1. You get to know this at the specific computer when you go to „Start -> Ausführen“ (or the magnifiers symbol under Windows 8/10) and than type in „cmd“ and press the enter button. The following window will open:

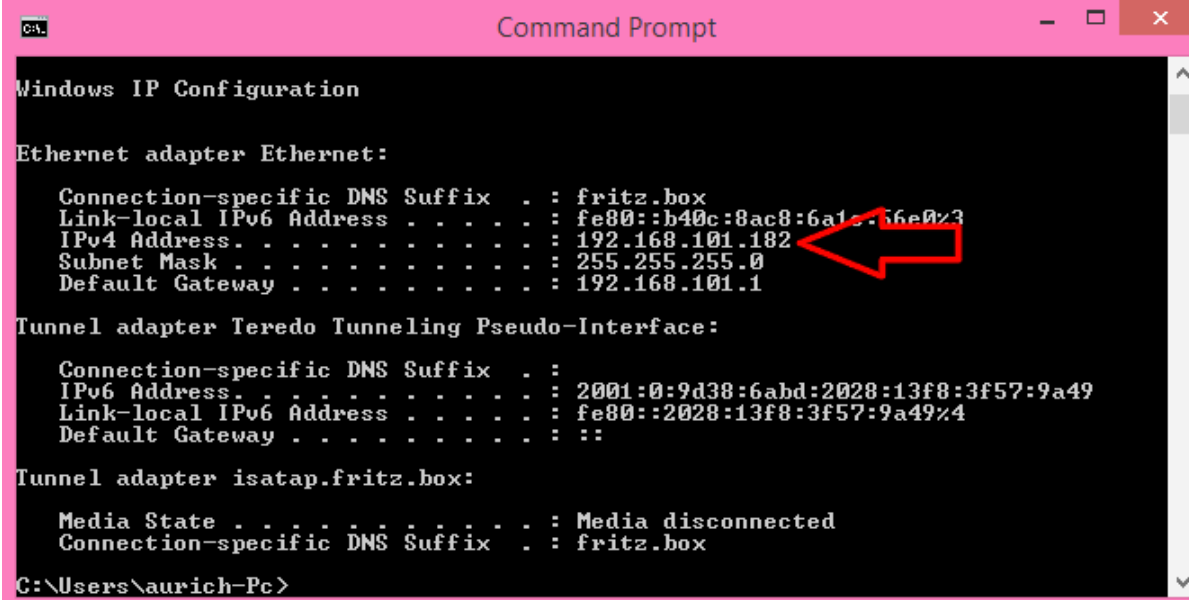

```
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.
C:\Users\aurich-Pc>_
```

2.3.2. Here you type „ipconfig“ and press the enter button.

```
Microsoft Windows [Version 6.3.9600]
(c) 2013 Microsoft Corporation. All rights reserved.
C:\Users\aurich-Pc>ipconfig
```

2.3.3.You can see the IP adresse under IPv4 adresse.

```
Command Prompt

Windows IP Configuration

Ethernet adapter Ethernet:

    Connection-specific DNS Suffix  . : fritz.box
    Link-local IPv6 Address . . . . . : fe80::b40c:8ac8:6a1c:56e0%3
    IPv4 Address. . . . . : 192.168.101.182
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 192.168.101.1

Tunnel adapter Teredo Tunneling Pseudo-Interface:

    Connection-specific DNS Suffix  . :
    IPv6 Address. . . . . : 2001:0:9d38:6abd:2028:13f8:3f57:9a49
    Link-local IPv6 Address . . . . . : fe80::2028:13f8:3f57:9a49%4
    Default Gateway . . . . . : ::

Tunnel adapter isatap.fritz.box:

    Media State . . . . . : Media disconnected
    Connection-specific DNS Suffix  . : fritz.box

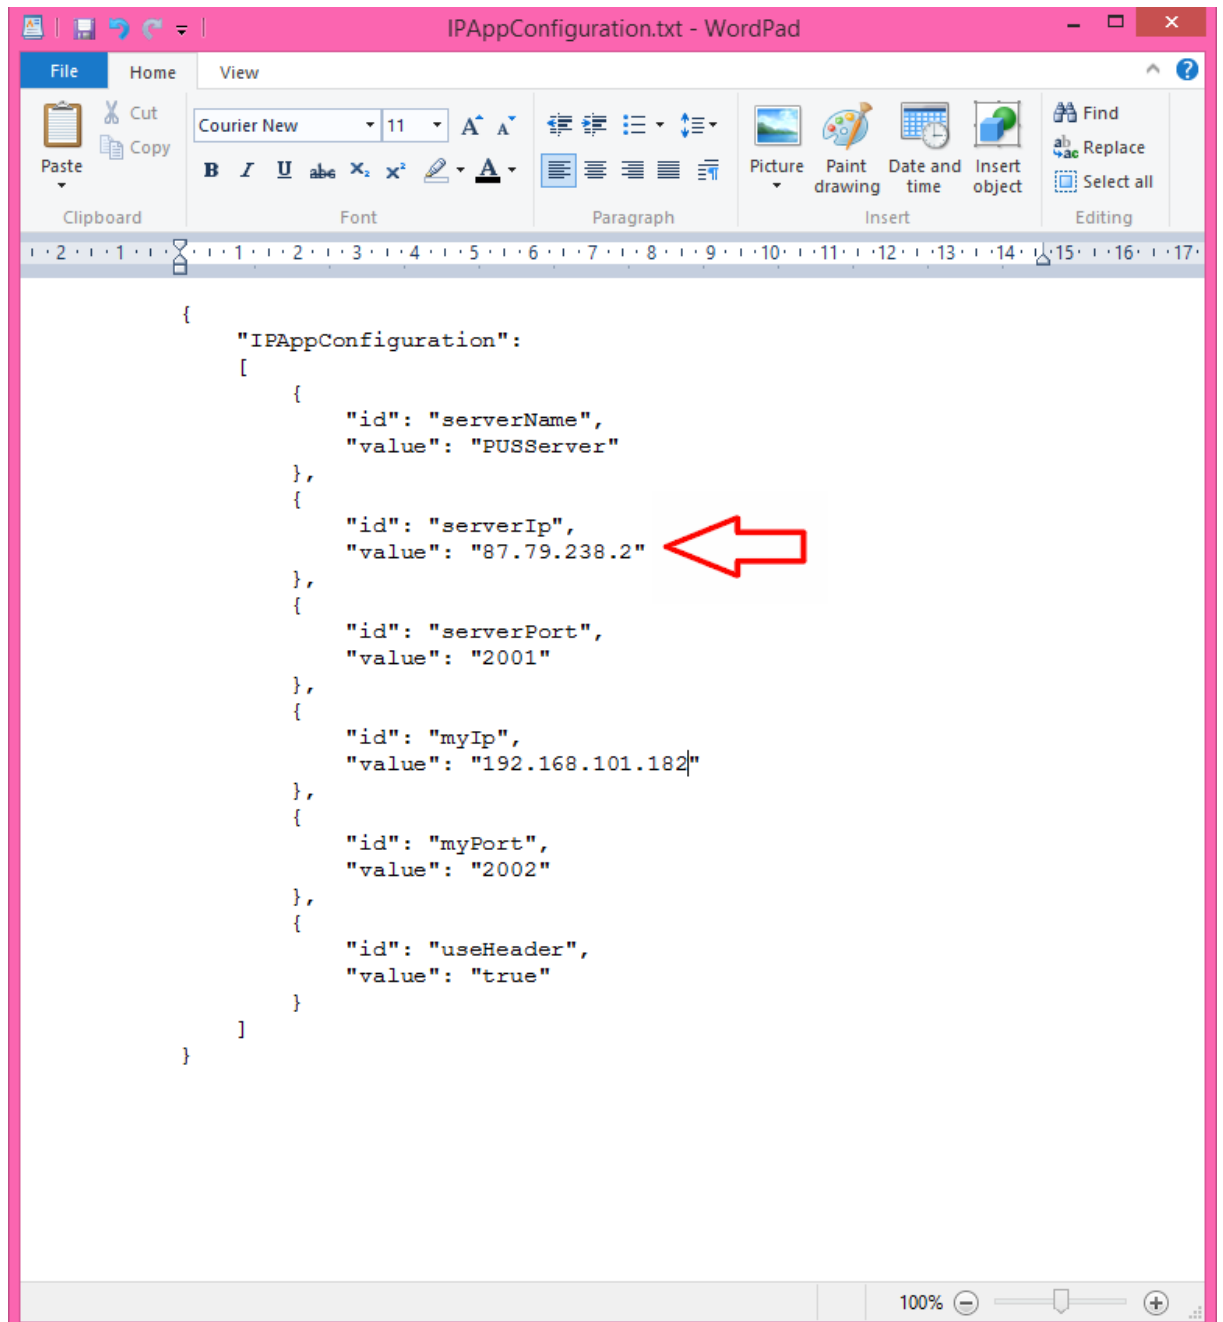

C:\Users\aurich-Pc>
```

2.3.4. You put this IP address in the IPAppConfiguration.txt under "id": "myIp" in between the quotation marks behind "value".

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "87.79.238.2"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "192.168.101.182"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

- 2.4. The server IP have to be known by the provider of the server, important is that it is the external IP and not the internal IP. If you run the ++SYSTEMS DEZENT-Server yourself, you can get to know your external IP about the router or the internet e.g. on the website <http://www.whatsmyip.org/>. You put this IP in the IPAppConfiguration.txt under "id": "serverIp" in between the quotation marks behind "value".

```
{
  "IPAppConfiguration":
  [
    {
      "id": "serverName",
      "value": "PUSServer"
    },
    {
      "id": "serverIp",
      "value": "87.79.238.2"
    },
    {
      "id": "serverPort",
      "value": "2001"
    },
    {
      "id": "myIp",
      "value": "192.168.101.182"
    },
    {
      "id": "myPort",
      "value": "2002"
    },
    {
      "id": "useHeader",
      "value": "true"
    }
  ]
}
```

3.3.2 Port forwarding

For a correct communication between ++SYSTEMS DEZENT and VISIMPLE The Game, the ports 2001 (on the router of the computer with ++SYSTEMS DEZENT) and 2002 (on the router of the computer with VISIMPLE The Game) have to be forwarded to the specific computer.

For this you have to find out the internal IP of the specific computer as described in the chapter 1.3.1 in the steps 2.3.1. to 2.3.3. .

If your router is managed by a network admin, ask for the port 2001 (when ++SYSTEM DEZENT is running on your computer) and for the port 2002 (when VISIMPLE The Game is running on your computer) to be forwarded to your internal IP.

If you are managing your router yourself, you have to set up this forwarding yourself. The procedure is different from router to router, but a good general manual you can find here:

<http://de.wikihow.com/Eine-Portweiterleitung-einrichten>

Put in step 5 your internal IP address in and port 2001 as start and end port (when ++SYSTEMS DEZENT is running on your computer) and port 2002 as start and end port (when VISIMPLE The Game is running on your computer).

4 In the menu

- The game needs a bit to load, this is normal and dependent on the chosen place (Wohlsborn is loading faster than Lünen)
- The engineer gives you a little introduction, you have not to read this every time.
- About the button(glass sphere) on the top right you can start directly to play.

- The button underneath opens an overview map, which shows different „Hot Spots“. When you click on them the engineer will tell you more about them.

Die im Ort verbauten Absetzgruben nähern sich dem Ende ihrer technischen Lebensdauer. Es mehren sich die Anfragen von besorgten Hausbesitzern, die den Einsturz ihrer Absetzgrube befürchten und nach einer Nachfolgelösung suchen.

KURZINFO

Absetzgruben reinigen Abwasser mechanisch. Die veraltete Technologie erreicht bei weitem nicht die Ablaufwerte moderner Abwasserreinigungsanlagen. Die hiesigen Anlagen haben das Ende ihrer Lebensdauer erreicht und müssen ersetzt werden. Entweder, jeder betroffene Bürger errichtet seine vergleichsweise teure Kleinkläranlage, oder der Abwasserzweckverband nutzt die Chance für eine zeitgemäße integrierte Abwasserbehandlung als flexible und nachhaltige Lösung. Durch Stoffstromtrennung könnten so auch Energiegewinne erzielt werden.

The screenshot shows a GIS application interface. At the top, a map displays a network of blue lines representing infrastructure, with a red circle and a 'HOT SPOT' label indicating a specific location. Below the map, a white information window is open. It contains a text box at the top with a speech bubble icon, a photograph of a manhole, a section header 'KURZINFO', and a paragraph of text. To the right of the text is an illustration of a man with a beard, wearing a green vest over a light-colored shirt, holding a laptop. On the right side of the information window, there are two circular navigation buttons: a back arrow and a gear icon for settings. The background of the application is a light brown color.

5 Actions in the simulation

5.1 Simulation Options

Before you play the game you can do some settings. You can do this through changing the slide control.

You have to make the following steps in this view, when you chose with the variant „with ++SYSTEMS DEZENT“:

1. Change the view to ++SYSTEMS DEZENT
2. Check in ++SYSTEMS DEZENT if the map finished loading in the main window and is viewable and that ++SYSTEMS DEZENT do not show a hourglass (Shows you that ++SYSTEMS DEZENT is still loading the map) or other signals, that it is still loading.
3. Change the view to VISIMPLE

! Always make these 3 steps after restarting the simulation

! Never close a ++SYSTEM DEZENT window with the „X“ button. ++SYSTEM DEZENT could not run anymore.

You can start the simulation with the button „Start Simulation“

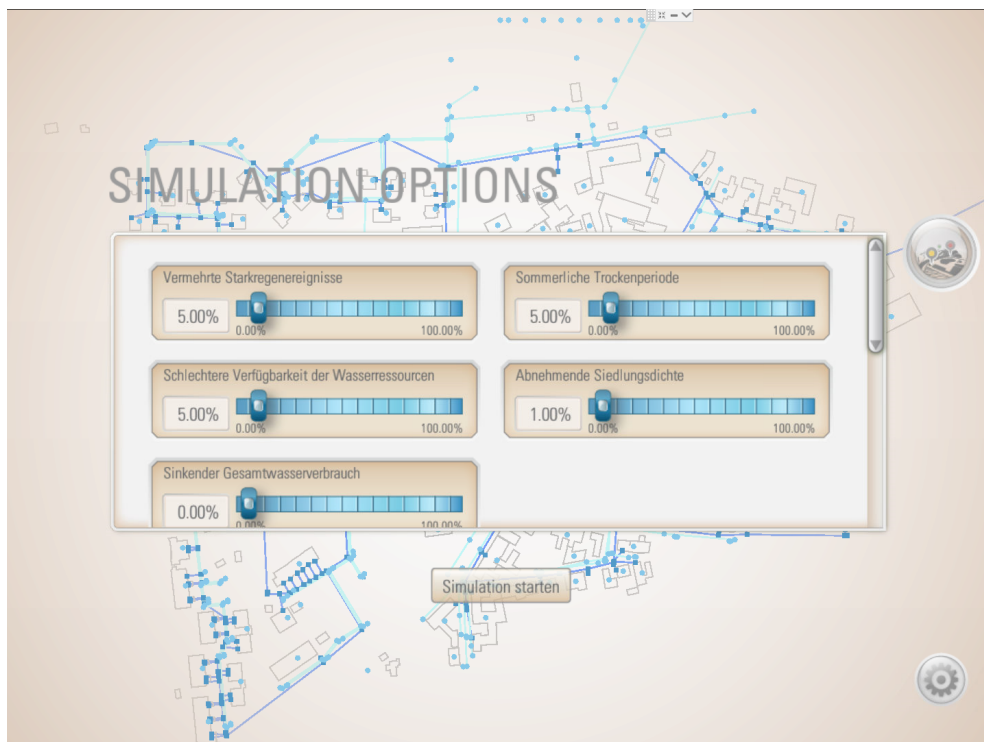

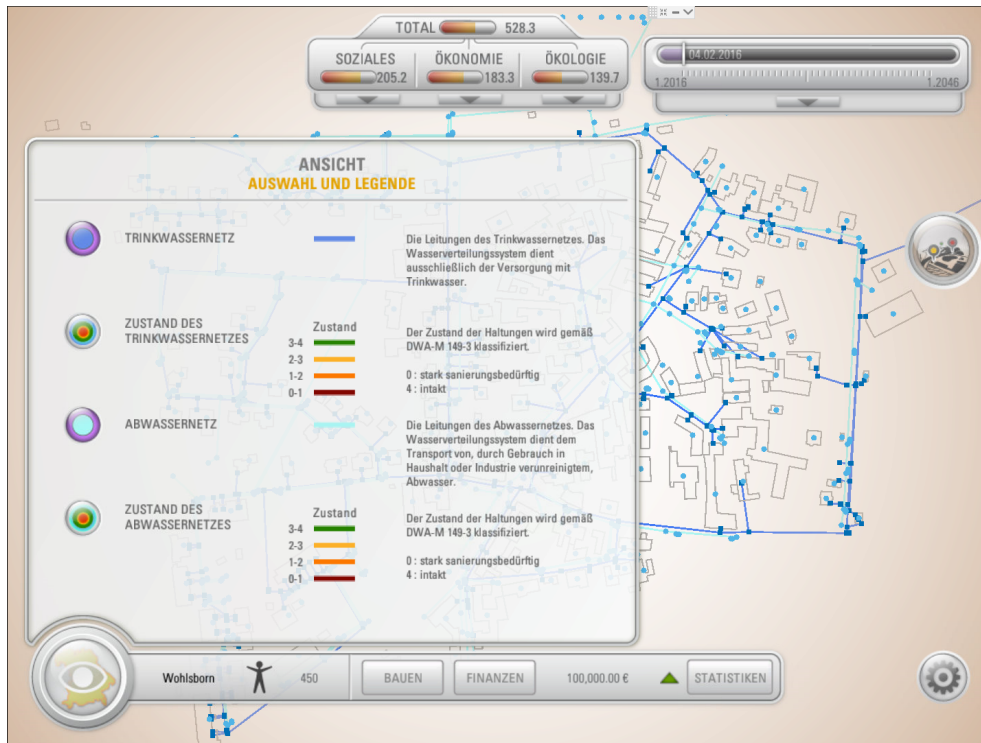

Figure 1 Ansicht für der Eisstellungen der Rahmenbedingungen vor der Simulation

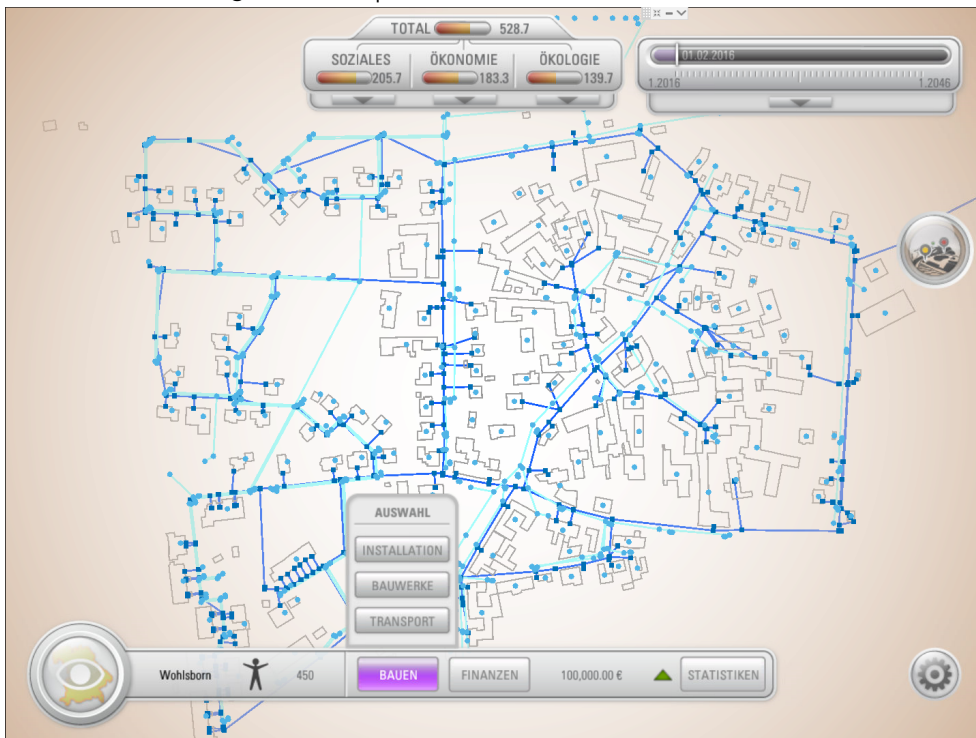

5.2 View in the simulation

With the view button (eye above the map) you can open the legend and a menu with which you can turn different views of the map on and off.

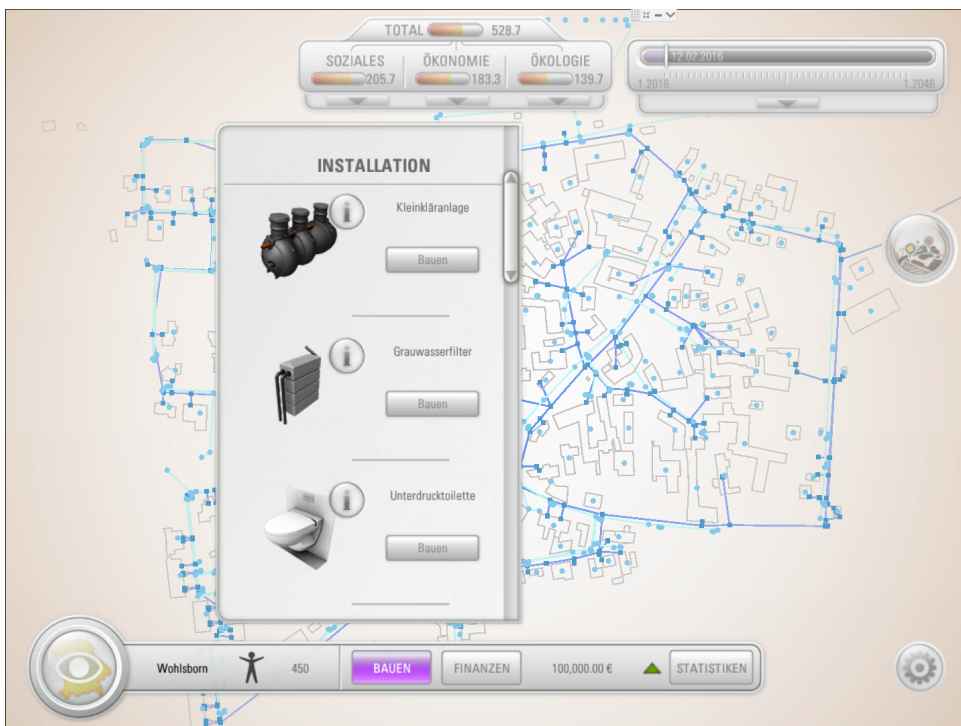

5.3 Build

Trough the build button you can open a menu where you can chose between the categories installation, buildings and transport.

When you chose a category you can see the different objects and trough the button build you can pick the specific objects.

There are 3 different ways of building:

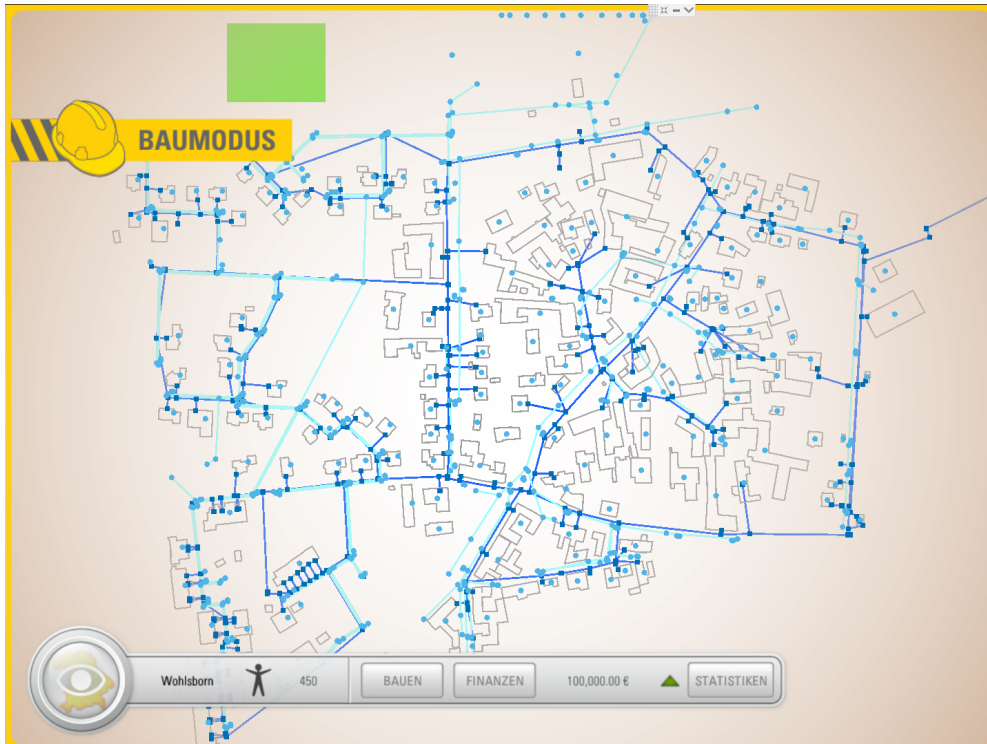

5.3.1 Build – Category: Installations

You install something in an existing building. For this click on the green outlines. You can chose and start several build assignments at the same time.

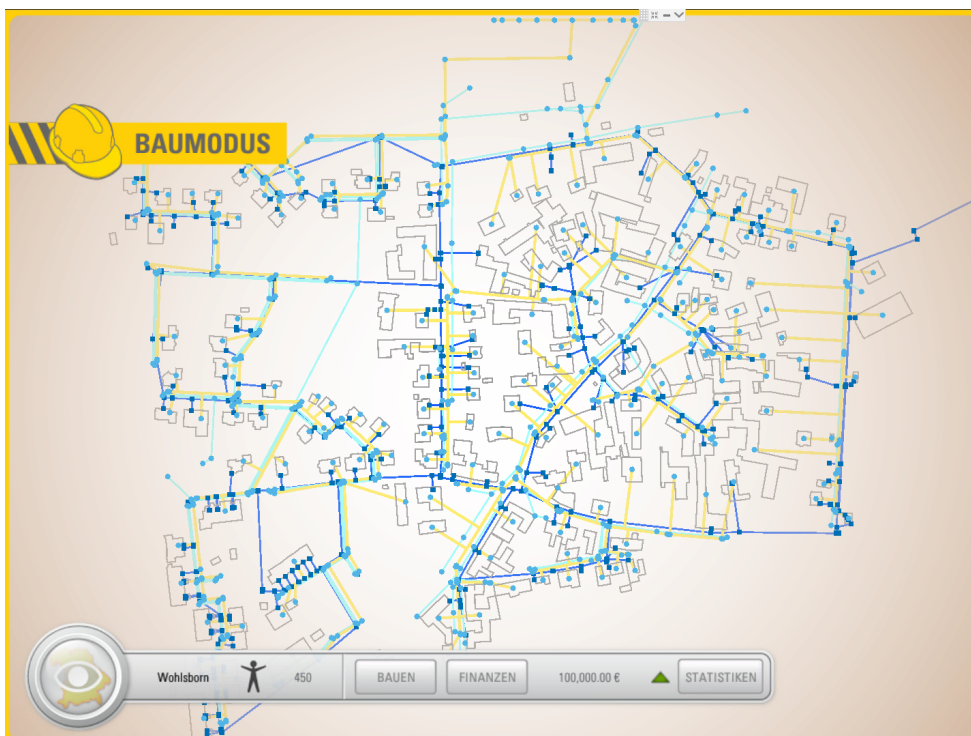

5.3.2 Build – Category: Buildings

You build a new building on a free property. For this click on the green field.

5.3.3 Build – Category: Transport

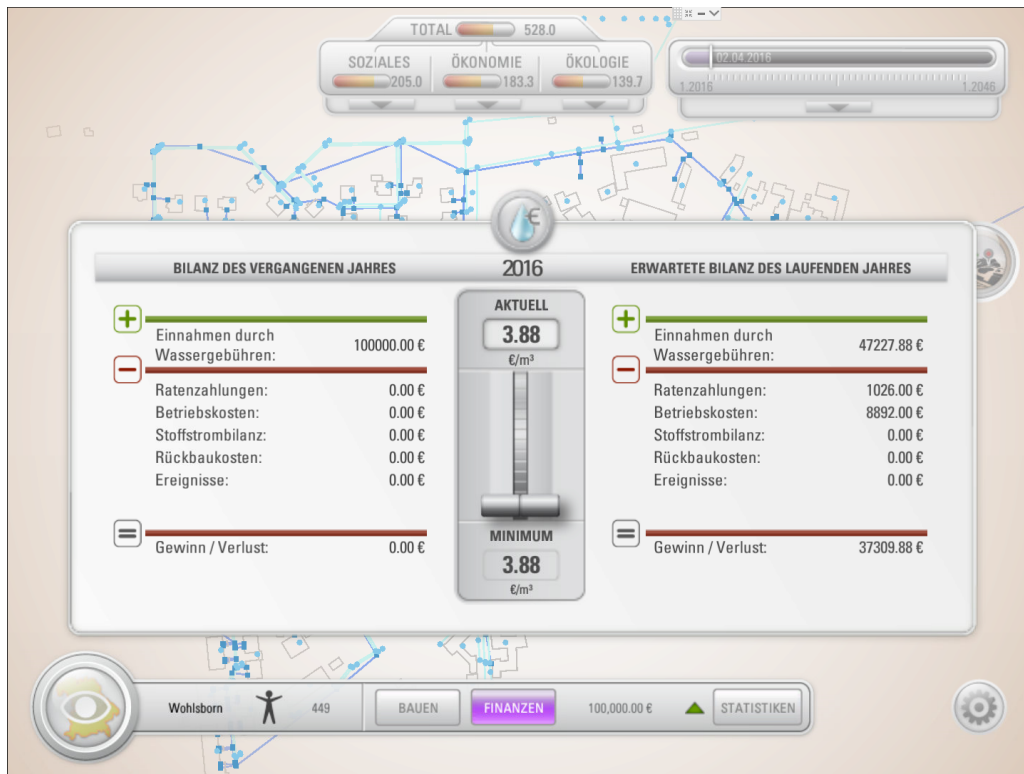

You repair or build new pipe lines. For this you click on the specific pipe line.

You can repair pipe sections automatically in the transport category so you have not to click every pipe section by yourself.

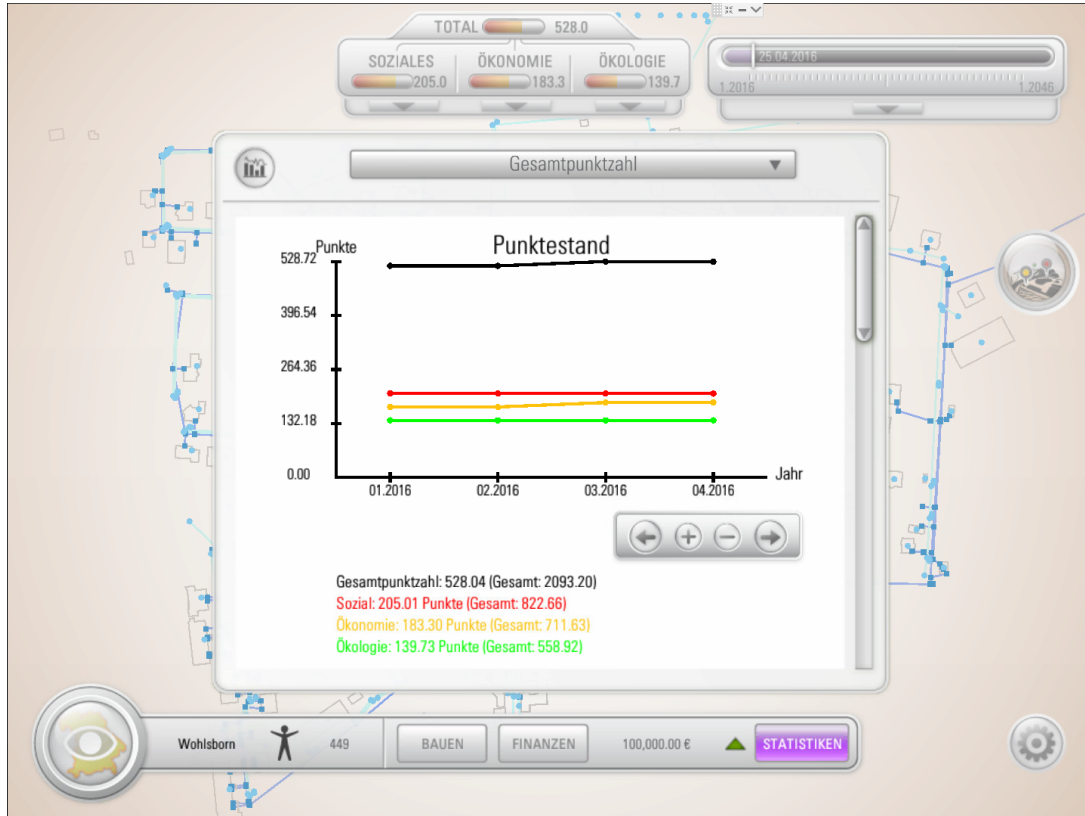

5.4 Finances

With the button finances you can get a balance sheet about your revenue and expenditure for the past and coming years. Also you can set your water- and sewagefee in this section.

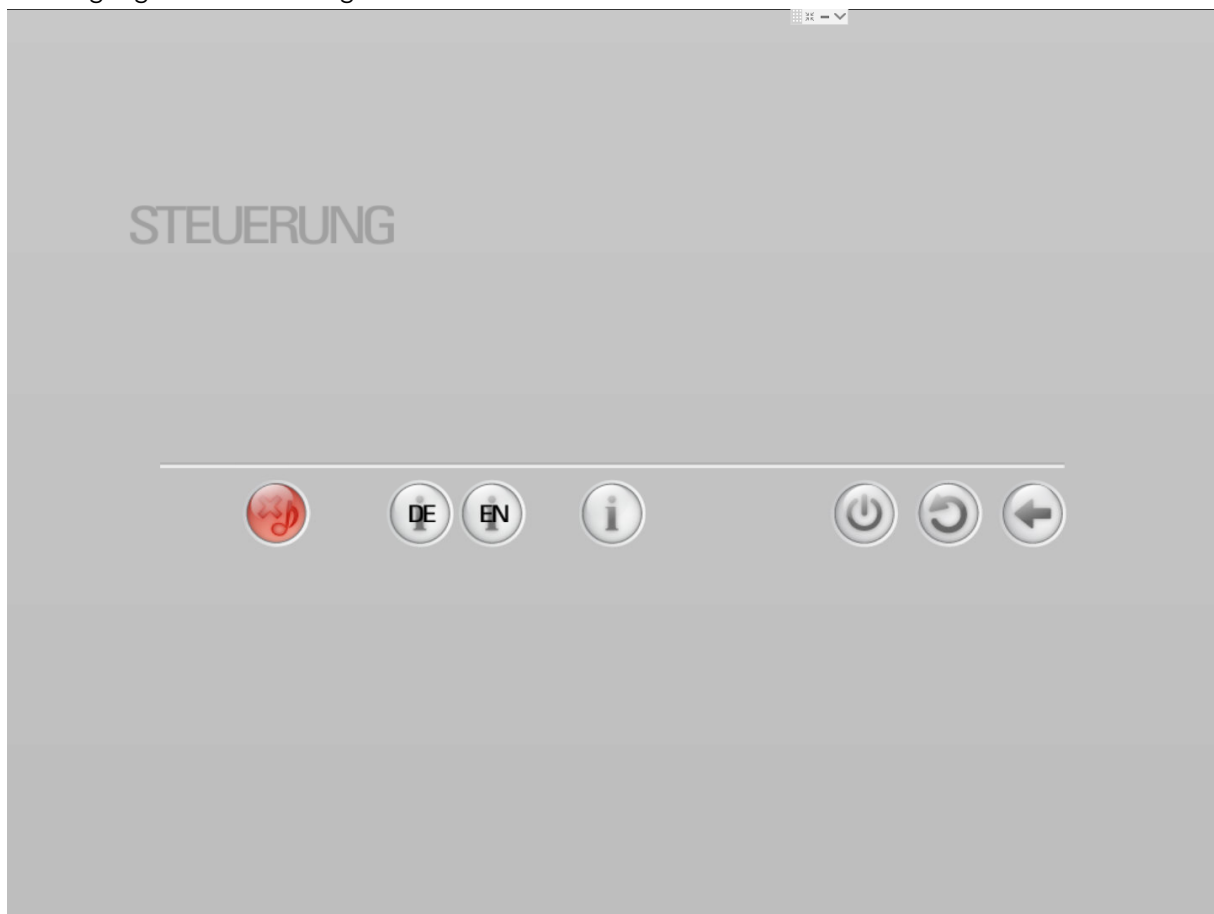

5.5 Statistics

Trough the button statistics you can see graphs for the themes score, finances, water protection and hygenie.

5.6 SETTINGS

With one click on the gear button you switch into a menu where you can turn of the volume, change the language and close the game or restart it.

Have fun planning!
